There are a few FAQs regarding lab grading. Please go through them if you have problems with the lab grades, it will save you a lot of time.

Note-> All the questions assume you replace "yourid" in "yourid.cpp" with your "your_email_id". Like in my case file name will be "schandrasekhar.cpp".

Q1→ I got zero in my lab, but it perfectly runs on my system?

Ans→

1- first check whether your filename is as per the lab instructions.

2- Does your code run perfectly in the lab computers (i.e., a Linux-based machine)? If not, you may need to make changes to your code so it runs there since we test your code on a similar machine. Always check your code on the lab computers (or a Linux-based machine) before submission. This includes Mac OS, or Windows Subsystem for Linux (WSL).

Q2→ I resubmitted my code but now the name of the file is suffixed by a number like yourid-1.cpp due to CatCourses. What should I do?

Ans→ Don't worry about that. During grading, we take care of this problem.
